

How to reactivate your Amazing Pace pedometer

To temporarily reactivate your Amazing Pace pedometer, please remove and reinstall the pedometer's battery. This will allow you to continue walking for your health and keep a manual daily step log until a new, computer-based pedometer program is introduced.

Removing and reinstalling the battery:

Using a small flathead screwdriver gently pry the battery cap off of the pedometer.

To remove the battery, slide the silver arm over the red programming button. Pry out the battery, wait 30 seconds and replace with the battery. Slide silver arm back.

Shake the pedometer to insure the battery contact is good and steps are recording. If not, try reinstalling the battery.

Remove Battery Cap
